*Our children,
our hope,
our future*

October 5, 2019

Dear Parents/Guardians:

A recent article in a local paper cited the results of testing that was conducted for lead levels in water at Oradell Public School. When that test was conducted in 2017, we found that there was one sink in the building that had a level of 16.8 parts per billion, which is above the U.S. lead-action level of 15 parts per billion.

However, the article did not also include the fact that the sink was located in the basement Board Offices, in an area which is never used by students. The sink was immediately replaced, and subsequent tests have been negative since that time.

The full set of testing results, along with additional information about testing for lead in drinking water, is posted on our web site at: [Water Testing Results](#)

Please feel free to contact my office if you would like additional information on this topic.

Sincerely,

John C. Anzul, Ed.D.
Superintendent
